

Global Synthetics Brand Credit Crisis, Default on Supplier Payments!

When it comes to Global Synthetics Pty Ltd(GS), I'm sure you are familiar with this wholly Australian owned company which has been rising rapidly in Australia in recent years and become a leading independent distributor of geosynthetics throughout Australia and the Pacific region. However, although GS shouts the slogan of the highest quality, it has no achievements in product quality, even used defective products in public works.

According to relevant sources, GS is currently involved in a dispute with his one of the largest supplier "Dalian Geo-Link Geosynthetics Co., Ltd" from China. GS used quality problem as an excuse to refuse to pay for other payable orders with Geo-Link and try to extract money from Geo-Link. However, GS cannot offer any evidence to prove that there is a quality problem with Geo-Link products. Such conduct of GS is a grave violation of international trade rules, without any business reputation and the sprit of contract.

Global Synthetics has always claimed "committed to delivering the highest levels of quality and service". On this matter, GS claimed that the batch of goods from Geo-Link is unaccepted products, but still apply these unaccepted products in national public project, instead of recall it at the first time. It shows GS has a serious credit crisis. If GS continues to shoddy, profiteering, false marketing, he must eventually take the consequences and will pay for it.
